

Our vision

A world in which the lives of the most vulnerable are improved by the best data systems.

Our mission

To enable decision makers to access the data they need to transform the lives of vulnerable people, at scale.

About Flowminder

Flowminder is a Swedish non-profit foundation with a branch office in the UK.

Our mission is to enable decision makers to access the data they need to transform the lives of vulnerable people, at scale. We are striving to create a world in which decisions that can improve the lives of vulnerable people are based on the most appropriate evidence.

We partner with decision makers and key stakeholders in national and international data systems to produce high-quality data, strengthen capacity, develop new methods and tools, and leverage novel data sources to improve the lives of vulnerable populations in low- and middle-income countries.

We provide information and capacity strengthening

to governments, mobile network operators, national and international agencies and researchers, and have developed sustainable partnerships with numerous mobile network operators in low- and middle-income countries. Our analysts have been working for over ten years in this field, whilst preserving the privacy of mobile network subscribers and data subjects, through data anonymisation and aggregation.

Our multidisciplinary team of experts includes epidemiological researchers, data scientists, software developers, engineers, and humanitarian practitioners.

We work with novel data types

Pseudonymised mobile phone usage data

Geospatial data

We work across the data value chain to provide timely and bespoke mobile data solutions. From data access to analyses and project implementation, our team is committed to finding the appropriate combination of products and services that works with the strengths and capacities of partners to ensure value is delivered via the whole data value chain.

Partnership building

Service Site Placement Optimisation

Data pipeline set-up & maintenance

Geospatial data analysis
